

(I ran my mom and my girlfriend through the scenario.)

SCENARIO : You are a financially impaired college student who needs a cheap way to access textbooks for your classes. You find our app and download three of the books you need in preparation for class next week.

Task 1: Download three books that you need for your various classes by searching for them.

Task 2: Add them all into their own folder, and Title it "Class Textbooks". (have to add)

Task 3: Open up one of the Textbooks you downloaded and change the font, go forward and back a page, and go to a different chapter.

Things needing changing:

1. A better UI, easier transitioning between options.
2. A way to directly add books to the folders through the downloaded books section.
3. A way to enter a page number, or chapter number to find a specific section of the book.

Things they enjoyed:

1. The search engine categories (Textbook, Title, Author).
2. The ability to change the font.
3. The ability to create collections of books and title them.
